

TRON
FreeTON

BRIDGE

toward decentralized internet

DOERS

close-knit team of top specialists from different professional fields who create, develop & brighten crypto

<https://svoi.dev>

blockchain projects experience & FreeTON specifically - included

MEANT TO BE CONNECTED

TRON

building the infrastructure for a
truly decentralized Internet
<https://tron.network>

FreeTON

community-powered movement
for a free and open internet
<https://freeton.org>
actively gaining momentum
with a solid base for powerful
development

LET US

create special multisig contracts that

- keep the token inside themselves
- translate it to the desired addresses on command

Contracts receive data from external oracles

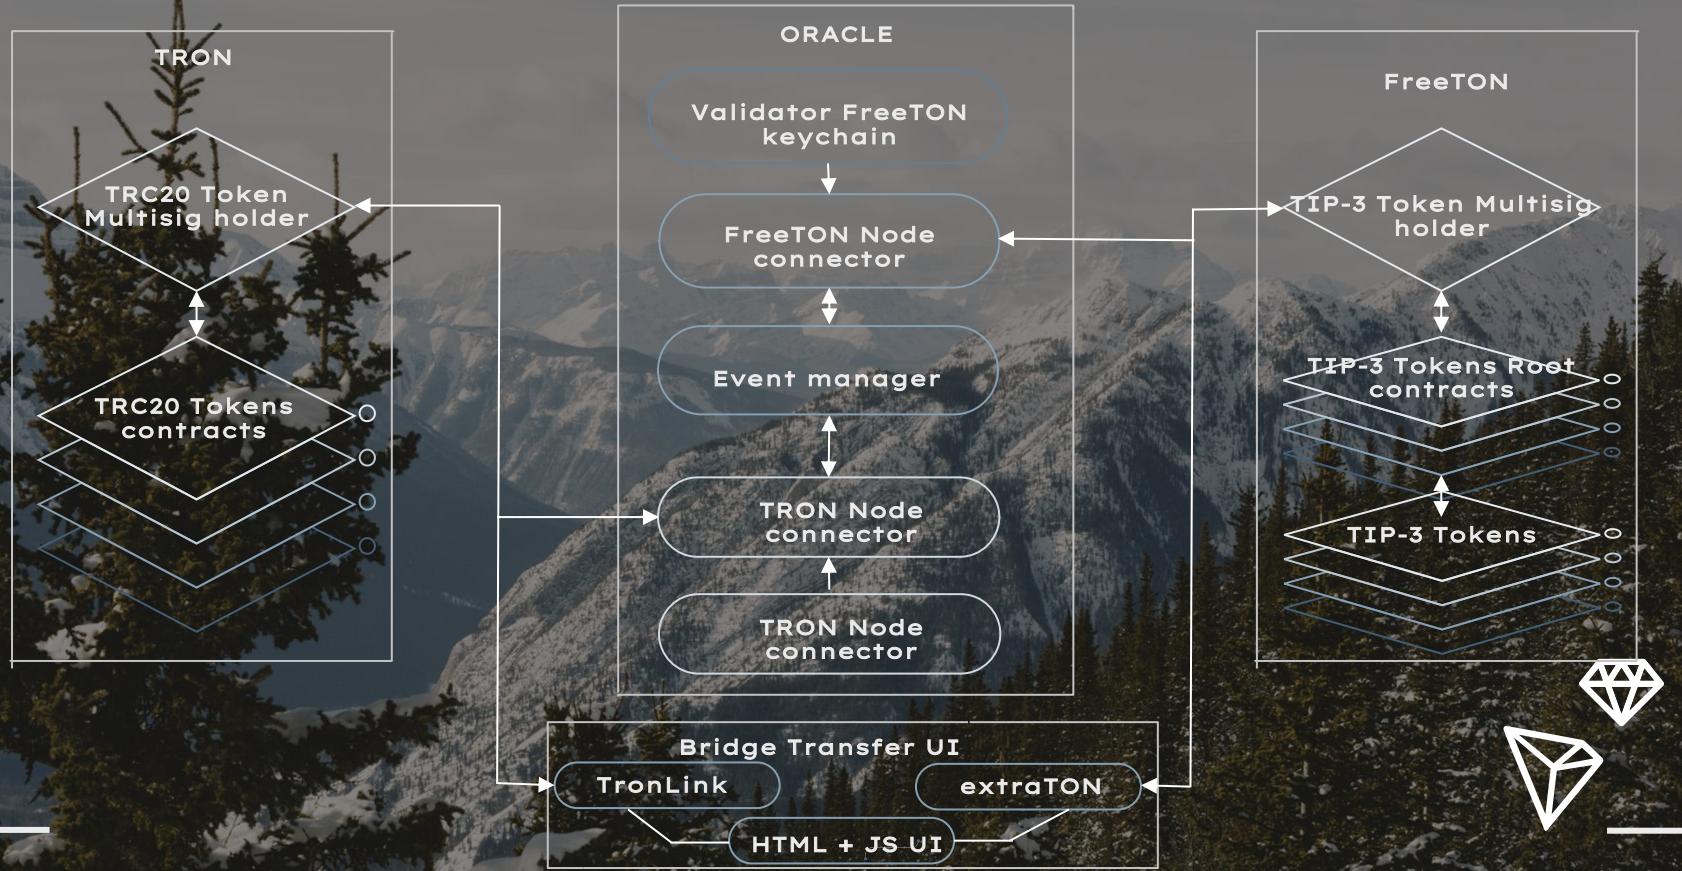

Oracles

- interact simultaneously with Tron and FreeTON,
- track requests for transfers of tokens from one network to another,
- validate transaction, transfer information about the transfer to the smart contract of another network,
- leave their signature.

The application is executed when a sufficient number of signatures from the oracles are collected
